Introduction	
1 Definitions	9
1.1 Exercises	17
2 Bieberbach Theorems	18
2.1 The first Bieberbach Theorem	18
2.2 Proof of the second Bieberbach Theorem	24
Cohomology group language	24
2.3 Proof of the third Bieberbach Theorem	32
2.4 Exercises	33
3 Classification Methods	36
3.1 Three methods of classification	37
3.1.1 The methods of Calabi and Auslander-Vasquez	38
3.2 Classification in dimension two	46
3.3 Platycosms	49
3.4 Exercises	57
4 Flat manifolds with $b_1 = 0$	59
4.1 Examples of (non)primitive groups	63
4.2 Minimal dimension	65
4.3 Exercises	71
5 Outer Automorphism Groups	72
5.1 Some representation theory and 9-diagrams	72
5.2 Infinity of outer automorphism group	79
5.3 \mathcal{R}_1 - groups	86
5.4 Exercises	94
6 Spin Structures and Dirac Operator	96
6.1 Spin(n) group	96
6.2 Vector bundles	99
6.3 Spin structure	102

6.3.1 Case of cyclic holonomy	110
6.4 The Dirac operator	116
6.5 Exercises	122
7 Flat manifolds with complex structures	124
7.1 Kähler flat manifolds in low dimensions	126
7.2 The Hodge diamond for Kähler flat manifolds	132
7.3 Exercises	137
8 Crystallographic groups as isometries of \mathbb{H}^n	138
8.1 Hyperbolic space \mathbb{H}^n	138
8.2 Exercises	143
9 Hantzsche-Wendt groups	144
9.1 Definitions	144
9.2 Non-oriented GHW groups	149
9.3 Graph connecting GHW manifolds	156
9.4 Abelianization of HW groups	158
9.5 Relations with Fibonacci groups	163
9.6 An invariant of GHW	167
9.7 Complex Hantzsche-Wendt manifolds	172
9.8 Exercises	175
10 Open Problems	177
10.1 The classification problems	177
10.2 The Anosov relation for flat manifolds	179
10.3 Generalized Hantzsche-Wendt flat manifolds	179
10.4 Flat manifolds and other geometries	181
10.5 The Auslander conjecture	183
Appendix I	184
Appendix II	188
Appendix III	192
Bibliography	200
Index	210
